

# Penetration Testing 101

*Ken Rowe, Grant Thornton LLP*

*Greg Ose, Neohapsis*

7:00pm 2405 Siebel Center

July 24, 2008

In today's complex networked environment, systems with security-relevant configuration flaws will be deployed despite the best of intentions from the IT staff. Penetration testing uses the techniques of system attackers to analyze systems and identify weaknesses. In this talk, Ken and Greg will introduce some of the standard tools in a penetration tester's arsenal. They will discuss usefulness and short falls in relying on penetration testing results.

Ken Rowe has worked in the area of information security for more than 25 years from NSA to NCSA to Cisco Systems. Ken leads the security services for the Midwest Region of Grant Thornton, LLP. Greg Ose is an Information Security Consultant with Neohapsis. He provides clients with penetration testing, application security assessments, and other information security services. Both Ken and Greg have been involved with the Red Team (attack team) for the Midwest Regional Collegiate Cyber Defense Competition.

Come early and socialize. Light refreshments provided by the Champaign County Economic Development Corporation will be available at 6:30pm.
